INTRODUCTION

The Library of the Environmental Research Center-Cincinnati is the scientific and technical information focal point for the U.S. Environmental Protection Agency. As such, it provides technical information backing to all EPA libraries and all EPA scientists, engineers, and researchers.

Traditional library services have been integrated with new automated services in order to meet the agency's information needs rapidly and efficiently. One of these automated services is using computer databases for literature searching.

Online computer literature searching has been offered at the Cincinnati Library since 1972, when this type of searching first became available nationally. It permits rapid access to millions of bibliographic citations and has proved to be cost effective in terms of both man-hours and dollars. Most of the literature written on a topic within the past 5 to 10 years can be identified in a matter of minutes.

The purpose of this publication is to explain the online searching services available at the Cincinnati Library, to outline the procedure for requesting a literature search, and to provide brief descriptions of the available databases.

This publication is the second edition of Computer Literature Searching and Databases and completely revises and updates the 1976 edition. The change in title to Online Literature Searching and Databases reflects the fact that almost all of the searching is now done online. Database information is current as of September 1978. Between 1976 and 1978 the number of databases available to the Cincinnati Library has grown from 74 to 124, representing a current total of more than 30 million bibliographic citations or records.

SEARCHING SERVICES

Literature searches are performed in response to specific requests from EPA personnel. They may be either retrospective or SDI (Selective Dissemination of Information).

In a retrospective search all of the years available in the database are searched. The information in most databases covers the last 5 to 10 years, a matter which is determined by the database producer and/or vendor. The searchable years for each database are specified in descriptions of the individual files.

In SDI or current awareness searching a search strategy or profile is run only in the most recent update of a database. Monthly SDI service is provided on request for those who wish to receive the most current information on a topic automatically.

Searches are performed online at a computer terminal, which permits instant viewing of results. Search analysts are reference librarians with expertise in scientific and technical literature, as well as in the operation of computer systems.

Using Boolean logic, the searcher combines terms appropiate to the subject being searched.

COMPUTER PRINTS

Computer prints are custom-made bibliographies or lists of citations on a search topic. A limited number of citations can be provided immediately at the terminal. Offline prints are ordered when a search produces a large number of citations. These are printed at the computer location on the evening of the same day, and are usually delivered within three working days. Prints are sent directly to the requester, whenever possible.

All databases citations include author, title, and source of the material. In addition, some include abstracts or summaries, index terms, author's address, language, and other types of data. Since database producers determine the items to be included, the appearance of printed citations from different databases varies widely.

Documents corresponding to the items on computer prints can be supplied at the requester's local library, either from the collection on-site of through interlibrary loan.

HOW TO REQUEST A LITERATURE SEARCH

The search topic should be described in a few sentences on a "Literature Search Request" form (EPA Form 2170-1, rev. 9-76), which is available in all EPA libraries. It is helpful to include a list of the most important keywords and phrases in addition to the titles and authors of several relevant papers.

Databases may be suggested, but this is not necessary. The search analyst will use as many as apply to the subject.

Locations other than Cincinnati. Those desiring literature searches may contact the local EPA librarian, who can provide request forms as well as assistance in stating the request. The librarian will send the request to the Cincinnati Library and will receive the prints when the search is completed.

A search analyst will contact the requester to discuss search strategy and terms. The requester may also be called while the search is in progress. This allows the requester to participate in the interactive process and suggest changes. If there are any questions concerning searches, call 513/684-7701.

Cincinnati. Requester may call the library, ext. 7701, for an appointment. Search strategy will be discussed and at least one database will be searched while the requester is present. The allows live interaction with the computer and the opportunity to review citations. Computer literature searching services through the Cincinnati Library are available to EPA personnel only.

COSTS

Search costs vary, depending on the complexity of the request and the fees for the database used. An average cost of $17.00 has been determined for each database searched. This includes computer connect time and offline print charges. Most searches require the use of 3 or 4 databases. The ERC-Cincinnati Library absorbs the search costs.

DATABASES

Databases used by the ERC-Cincinnati Library are primarily scientific and technical files whose material can support the multiple facets of EPA's mission--environmental research and development relevant to setting standards for pollution control and enforcing these standards within the framework of anti-pollution legislation.

Many of these databases correspond to specific abstracting and/or indexing publications. Some databases include abstracts and others do not. Information as to a database corresponding with a printed product and whether abstracts are included in the computer version is part of individual database descriptions.

Types of material indexed in most databases are: scientific and technical journal articles, government reports, conference and symposia proceedings, dissertations, patents, books, and research projects.

These databases are available to the ERC-Cincinnati Library through contractual agreements with commercial database vendors and interagency agreements with government organizations, making more than 120 databases searchable.

Tables on the following pages provide brief descriptions of the individual databases. In the first column of the database tables abbreviations are used for vendor names as follows:

BIOETHICSLINE 1973 - Present NLM	Bioethics Online 5,500	CENTER FOR BIOETHICS, KENEDY INSTITUTE, GEORGETOWN UNIVERSITY, Washington, DC Indexes material on questions of ethics and public policy arising in health care and biomedical research. Includes medical confidentiality, euthanasia, abortion, and behavior control techniques. Journal and newspaper articles, monographs, court decisions, statutes and audiovisuals are cited. Corresponds to the Bibliography of Bioethics.
BIOSIS PREVIEWS BRS-1970-Present LIS-1970-Present SDC-1969-Present	BioSciences Information Service Previews 2,000,000	BioSCIENCES INFORMATION SERVICE, Philadelphia, PA Worldwide coverage of research in the life sciences. Literature selected must meet one of the following criteria: Original research reports in biological and biomedical fields; reviews of original research in biology; history and philosphy of the biological and biomedical sciences; or documentation and retrieval of biological and biomedical information. Citations are taken from more than 8,000 serials, as well as books, research communications, reports and symposia. Subjects include: agriculture, microbiology, plant and animal sciences, biochemistry, environmental biology, experimental medicine, public health, ecology, toxicology and virology. Citations are from Biological Abstracts (BA) and BioResearch Index (BRI).
CA CONDENSATES/ CASIA - LIS CA SEARCH - BRS CAS - SDC (Formerly CHEMCON & CHEM7071) 1970 - Present BRS LIS SDC	Chemical Abstracts Condensates/ CA Search 3,000,000 BRS will be using the CA Search file from 1977 to the present.	CHEMICAL ABSTRACTS SERVICE, AMERICAN CHEMICAL SOCIETY, Columbus, OH Covers the world's scientific and technical literature for chemistry, chemical engineering, and chemical aspects of the life sciences. Includes biochemistry, organic chemistry, macromolecular chemistry, and physical and analytical chemistry. Indexes articles from 12,000 journals, patents from 26 countries, government research reports, books, dissertations, and proceedings of conferences and symposia. Corresponds to Chemical Abstracts. LIS has merged the CASIA file and the CA Index Guide with CA Condensates from 1972 to the present. SDC has loaded a new chemical information file based on CA Search which is named CAS77-. This replaces CA Condensates and CASIA, and covers 1977 to the present. The 1972 to 1976 file is being reloaded and is named CA7276.

EDB 1974 - Present DOE	Energy Database 400,000	DEPARTMENT OF ENERGY, TECHNICAL INFORMATION CENTER, Oak Ridge, TN International coverage of energy-related scientific and technical literature, including nuclear energy, petroleum, natural gas, coal (gasification, liquefaction and desulfurization), solar energy, and geothermal energy. Basic supporting research in physics, chemistry and biology is also included. This database had its genesis in the information programs of the Atomic Energy Commission (AEC) and the Energy research and Development Administration (ERDA), which have now been absorbed into the Department of Energy (DOE). The file contains all unclassified information processed at the DOE Technical Information Center. Sources are journal articles, government reports, patents, monographs, conference proceedings, dissertations, and translations. Material in some subject areas, such as solar and geothermal energy, dates from the 1800's. Abstracts are included for many of the entries processed since June 1, 1976. Publications produced from the database include Energy Research Abstracts, Energy Abstracts for Policy Analysis, and other abstracting journals and bibliographies from the TIC.
